

# RCII - Charts

The **RCII** is a data visualization tool. Click the **Charts** tile or the **Charts** tab to access the charting functionality (note, the same charting capability is also available at the bottom of the **Country Profile** tile/tab).

**Insert your country(ies) of interest, and select your variables to generate a new chart. Data type available for your chart depends on the style of chart you choose to create.**

# RCII – Longitudinal Charts

To create longitudinal line charts, use the “Longitudinal Tab” and select a minimum of 1 **country** and 1 **variable**. You may chart 1 **country** with multiple **variables** using country **scores** or **rank**. You may also chart multiple **countries** with one **variable** using **score**, **rank**, or **raw data**. Change over time will be graphed from 2005 to the current year.

# RCII – Bar Charts

Bar Charts support using the RCII Score and Raw Data – simply select the “Bar” Tab, data type (**score** or **raw data**), and **countries** and **variables** of interest. Year of analysis can be changed from the drop down menu. You may chart one **country** with multiple **variables** using country **scores** or multiple **countries** with one **variable** using **score** or **raw data**. Note: the Y-Axis is adjustable for raw data to create more descriptive bar or longitudinal raw data charts.

# RCII – Advanced Bar Charts

Choose multiple countries and a single variable, or one country and multiple variables

NOTE: Bars can be grouped (shown) or stacked. Stacked bars should only be used for additive variables.

NOTE: Bar charts support Score or Raw Data visualizations only. When visualizing Raw Data, only one variable at a time can be visualized.
